Title

Smart Attendance Sytem with Auto-Time Classification

Introduction

In many schools, attendance tracking is still done manually, which can lead to errors, time consumption, and inaccurate records. With the advancement of web technology, attendance systems can now be automated to improve efficiency and reliability.

This project proposes a Smart Attendance System that automatically records student attendance and classifies their status based on their arrival time. By using a web-based platform, our system provides a faster, more accurate, and user-friendly way of managing attendance.

System Purpose

The purpose of our system is to:

- Automate the process of recording attendance
- Reduce manual errors in tracking students presence
- Classify attendance status(Early,On-time,Late.Absent)automatically
- Provide an organized and accessible record for teachers

Target user

Our system is designed for:

- ✓ **Teachers** – to monitor and manage attendance easily
- ✓ **Students** – to record their attendance quickly
- ✓ **School Administrators** – to review attendance reports and trends

Key Features

1. Student Check-In System

Students can input their ID to record their attendance quickly and easily.

2. Auto-Time Classification

The system automatically labels attendance as:

- Early
- On-Time
- Late
- Absent

based on predefined time rules.

3. Attendance Records Monitoring

Teachers can view all attendance records in a table format for easy tracking.

4. Organized Database Storage

All attendance data is stored securely in a database for future reference.

5. Real-Time Recording

Attendance is recorded instantly upon submission, ensuring accurate time tracking.
